SI A1750 air supported antistatic bar

Length 1750 mm

SI A1750 is an air supported antistatic bar that is used to more intensive and distance independent dissipation of static electricity from surfaces. It is also possible to remove dirt particles from the surface by the air flow from the air channel of the bar. Typical applications are the unloading of sheets of paper and bows in printing, packaging production and plastic production. Wherever materials due to high electrostatic charge cannot be processed or moved. The swepro antistatic bars are built to customer requirements. The air supported antistatic bar has a compact design with a cross section of 30x30mm. All bars have at each end holes for M6 screws for easy mounting. The following standard lengths are available: 250mm / 450mm / 650mm / 950mm / 1350mm / 1750mm. Other lengths of up to 2950mm.
